

How to Enable VNC for Your Virtual Server *

Enabling VNC for your virtual server is a breeze, and we're here to help every step of the way. Here's how to do it:

1. Go to your Virtual Server [Management page](#) and click on the "**Settings**" tab, then select "**VPS Configuration**".
2. On this page, you'll see the VNC option - just tick the box and hit "Submit".
3. Stop and start your Virtual Server from the Virtual Server Control Panel to apply the changes. Please note that rebooting through your virtual server (for example, by using the 'reboot' command) won't apply the changes.

That's it! Your virtual server now has VNC enabled.
